

## Step 1.

Remove the eight (8) screws holding the two pieces of the handle together. They can be seen on the side of the handle.

## Step 2.

Separate the two pieces and remove the hose from the handle.

## Step 3.

Transfer the switch from the old handle to the new handle. It will slide out of the old handle and into the new one the same way.

#### **Step 4.**

Insert the hose end into the new handle.

---

#### **Step 5.**

Place the other half of the new handle into place to close. Then, insert the included eight (8) screws.
