

OVO 700 CENTRAL VACUUM

Steps to Fully Reset the Control Board

- 1) Make sure the vacuum bag and filter are not clogged. Check the hose for proper air flow by turning it on without any accessories attached to it.
- 2) Disconnect the low voltage wire from the side of the vacuum unit by pressing to the side and pulling the wire out.
- 3) Press the small black button on the side of the vacuum (below the big black one) and hold it for 20 seconds. The green light will flash a few times then come back to the solid green color.
- 4) Disconnect the electrical plug from the wall wait 20 seconds then plug it back into the wall.
- 5) Reconnect the low voltage wire to the vacuum. Either wire can go in either side.
- 6) Start the vacuum by using the hose in home.
